

IMMY Implements Copley's FDA Extended Solution

“ With Copley, we now have one system that handles all of our business requirements, including our need for data integrity as well as our documentation for GMP risk areas, leading to an improvement in our overall business processes.”

-Sean Bauman, CEO of IMMY

About IMMY

IMMY is a biotech company located in the heart of Norman, OK. Founded in 1979, the organization manufactures, markets, and distributes their own innovative lines of diagnostic tests and reagents. IMMY specifically focuses on mycology, or the study of fungi, which was a virtually forgotten area in the clinical laboratory at the time the company was established. Since that time, IMMY has evolved from a company that filled a need in the market to an organization with a global focus on saving lives through affordable diagnostics.

IMMY was leveraging a paper-based validation system that did not allow for growth while complying with FDA regulations. They had been running several systems of record and disparate solutions that led to data being handled multiple times, which caused an increase in errors and risk with FDA compliance. With the move into a new facility in 2016, the company needed an ERP solution that could scale with its growing business requirements. Copley Consulting implemented our FDA Extended Solution for Infor CSI to replace IMMY's various systems, while also providing all the functionality needed for them to meet FDA regulatory requirements.
